## KOMPAQ DRAIN®

**U** DRAINAGE  
SYSTEMS

**ULMA**

ARCHITECTURAL **SOLUTIONS**

# WHO WE ARE

**ULMA Architectural Solutions** is a member of the **ULMA Group**, a leading industry group in the Basque Country, and also part of the Industrial Division of the **MONDRAGON Corporation**, one of the largest business corporations in Spain and the largest Cooperative Group in the world.

Our expertise and experience in **prefabricated systems for construction** has led us to develop a wide range of products aimed at **four market segments**:

EXTERNAL  
WALL SYSTEM

DRAINAGE  
SYSTEMS

VENTILATED  
FACADES

ARCHITECTURAL  
PRECAST

## OUR MATERIAL

### COMPRESSIVE STRENGTH

The polymer concrete used in prefabricated systems is capable of withstanding compression forces greater than 1000kg/cm<sup>2</sup>.

### FLUID DRAINAGE

The polymeric nature of this material allows smooth surfaces with very low friction on prefabricated elements, thereby facilitating the rapid run-off of fluids and also offering a water absorption index which is virtually non-existent, compared with 5-10% of traditional concrete.

### RESISTANCE TO CHEMICAL PRODUCTS

Polyester resin, one of the components of Polymer Concrete, is a material resistant to a very wide range of chemical products; it is an inert material and therefore does not react when it comes into contact with chemical compounds, no matter its concentration.

### ABRASIVE WEAR

The hardness of silica aggregates ensures good preservation of structures exposed to road traffic, since polymer concrete shows optimal resistance to abrasion.

### IMPACT RESISTANCE

The qualities of this material, together with its optimal prefabrication design, increase its capacity to withstand and absorb impact forces, making it highly resistant.

**POLYMER CONCRETE** is a high performance material made up of a precise combination of silica and quartz aggregates bonded by polyester resins.

In addition to its **extremely high resistance to compression**, far greater than other traditional concretes, its polymer matrix ensures a high **resistance to most chemical products**. Moreover, the percentage of **water absorption is practically nonexistent**, ensuring its **stability during freeze-thaw cycles**. Its **great impact strength** and **low abrasive wear** are additional features that make polymer concrete the ideal material for the drainage of water and a wide variety of other fluids, even in such demanding environments as the industrial, food, chemical and pharmaceutical sectors.

POLYMER  
CONCRETE  
by **ULMA**

PHYSICAL PROPERTIES	STANDARD	VALUE
Compressive strength	EN1433	>90 MPa
Resistance to bending	EN1433	>22 MPa
Water absorption	EN 14617-1	0.1%
Resistance to bending after freeze/thaw cycles	EN 14617-5	23.8 MPa
Resistance to abrasive wear	EN 14617-4	32.5 MPa
Resistance to impact	EN 14617-9	5 J
Density	EN 14617-1	2.1 g/cm <sup>3</sup>
Resistance to thermal change	EN 14617-6	23.6 MPa
Coefficient of linear thermal expansion	-	2.15-10 <sup>-5</sup> °C <sup>-1</sup>
Resistance to chemicals	EN 14617-10	C4

# Compact Channel **KOMPAQDRAIN®** with Max Flow® system

Specially designed for areas with high traffic density by **ULMA Architectural Solutions**, specialists in drainage system, this novel compact channel made of polymer concrete, is suitable up to load class F900, according to standard EN-1433.

Motorways, airports, service stations and other intense traffic areas require high drainage and maximum safety, requirements to which **KOMPAQDRAIN®** responds with a combination of features that make it unique on the market.

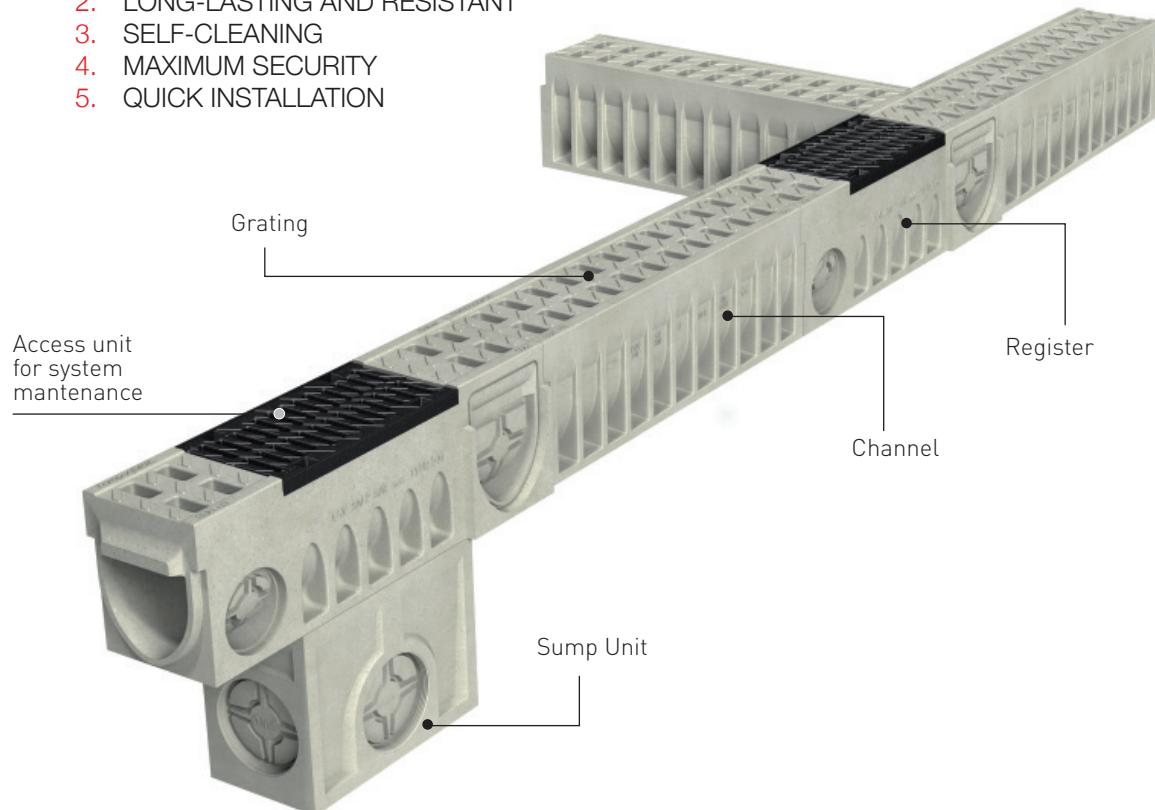

## GRATING DESIGNS

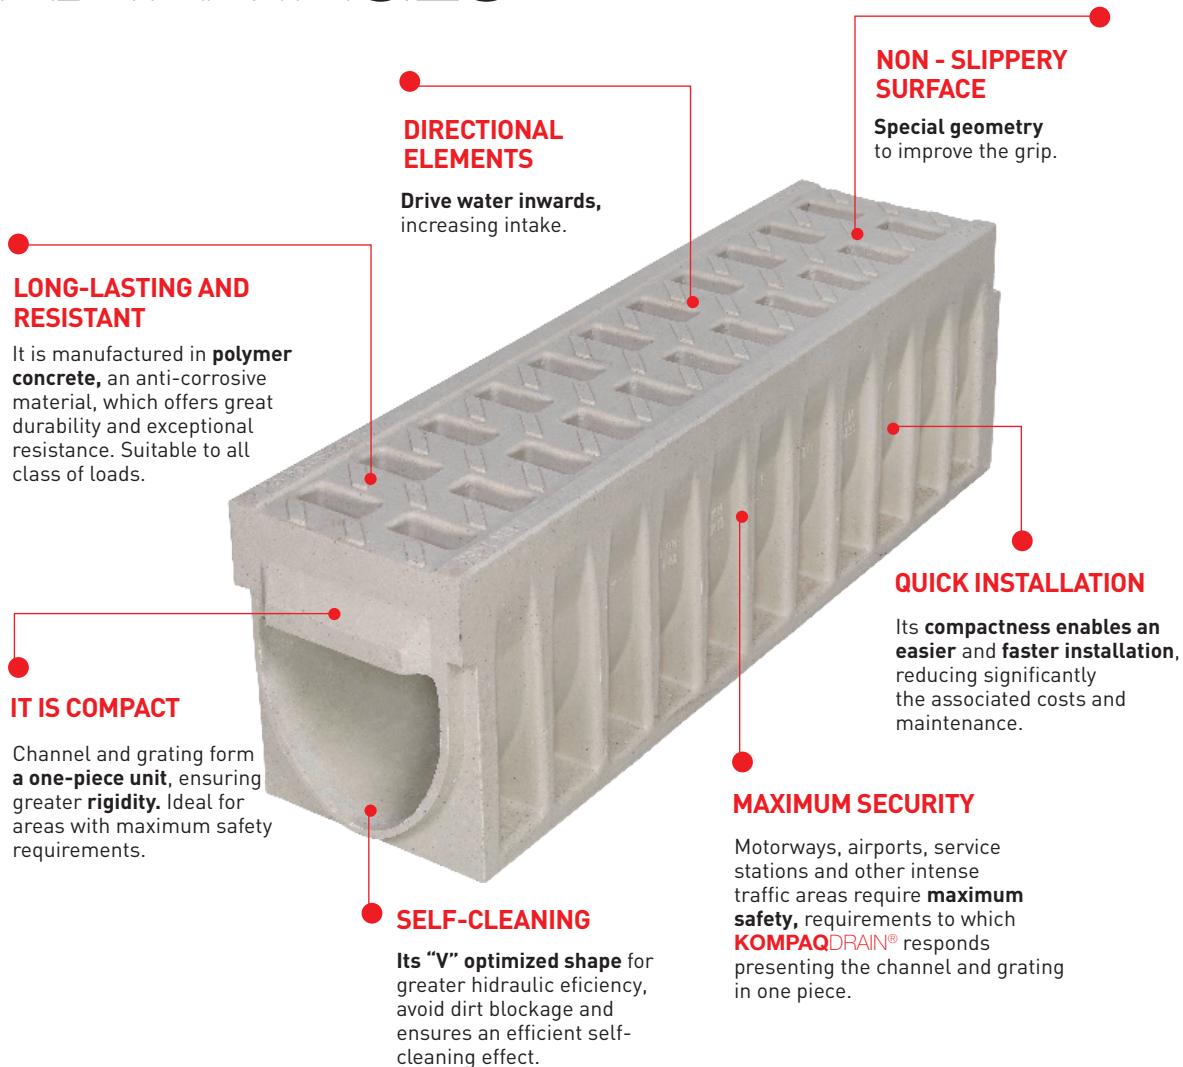

## ADVANTAGES OF THE SYSTEM

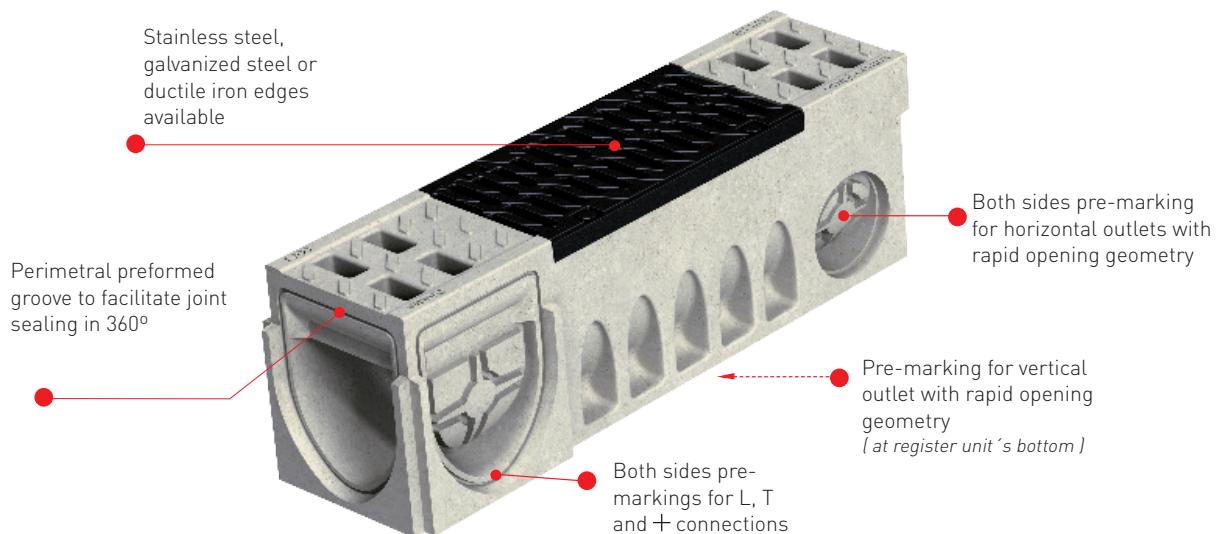

1. COMPACT
2. LONG-LASTING AND RESISTANT
3. SELF-CLEANING
4. MAXIMUM SECURITY
5. QUICK INSTALLATION

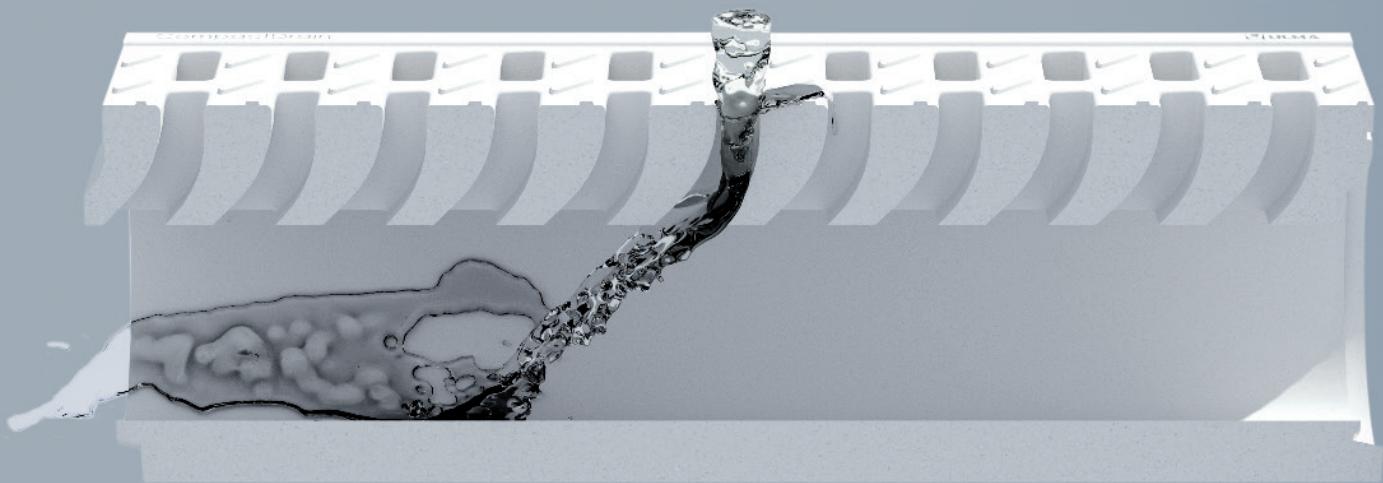

# KOMPAQDRAIN® ADVANTAGES

## REGISTER

# Max Flow® SYSTEM

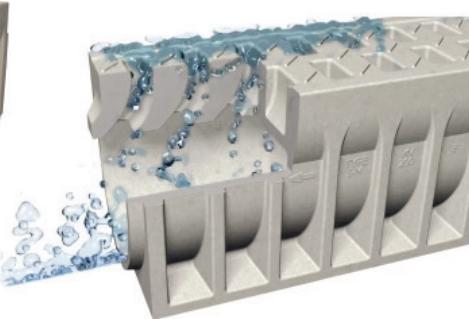

The original curved design of the inlets, together with the non-slip surface and water router, achieve the novel **Max Flow®** effect, **increasing the water speed and the drainage capacity**. Moreover, the progressive widening of the orifices helps the waste pass through more easily. Therefore **KOMPAQDRAIN®** can drain the same volume of water with a smaller channel.

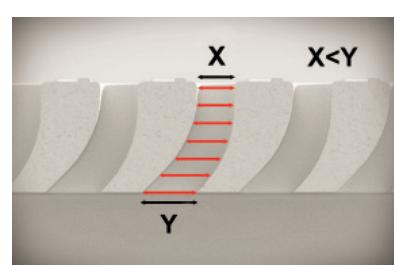

**KOMPAQDRAIN®** meets all requirements of the EN-1433 international standard of quality and reliability.

// CURVED DESIGN  
OF THE INLETS

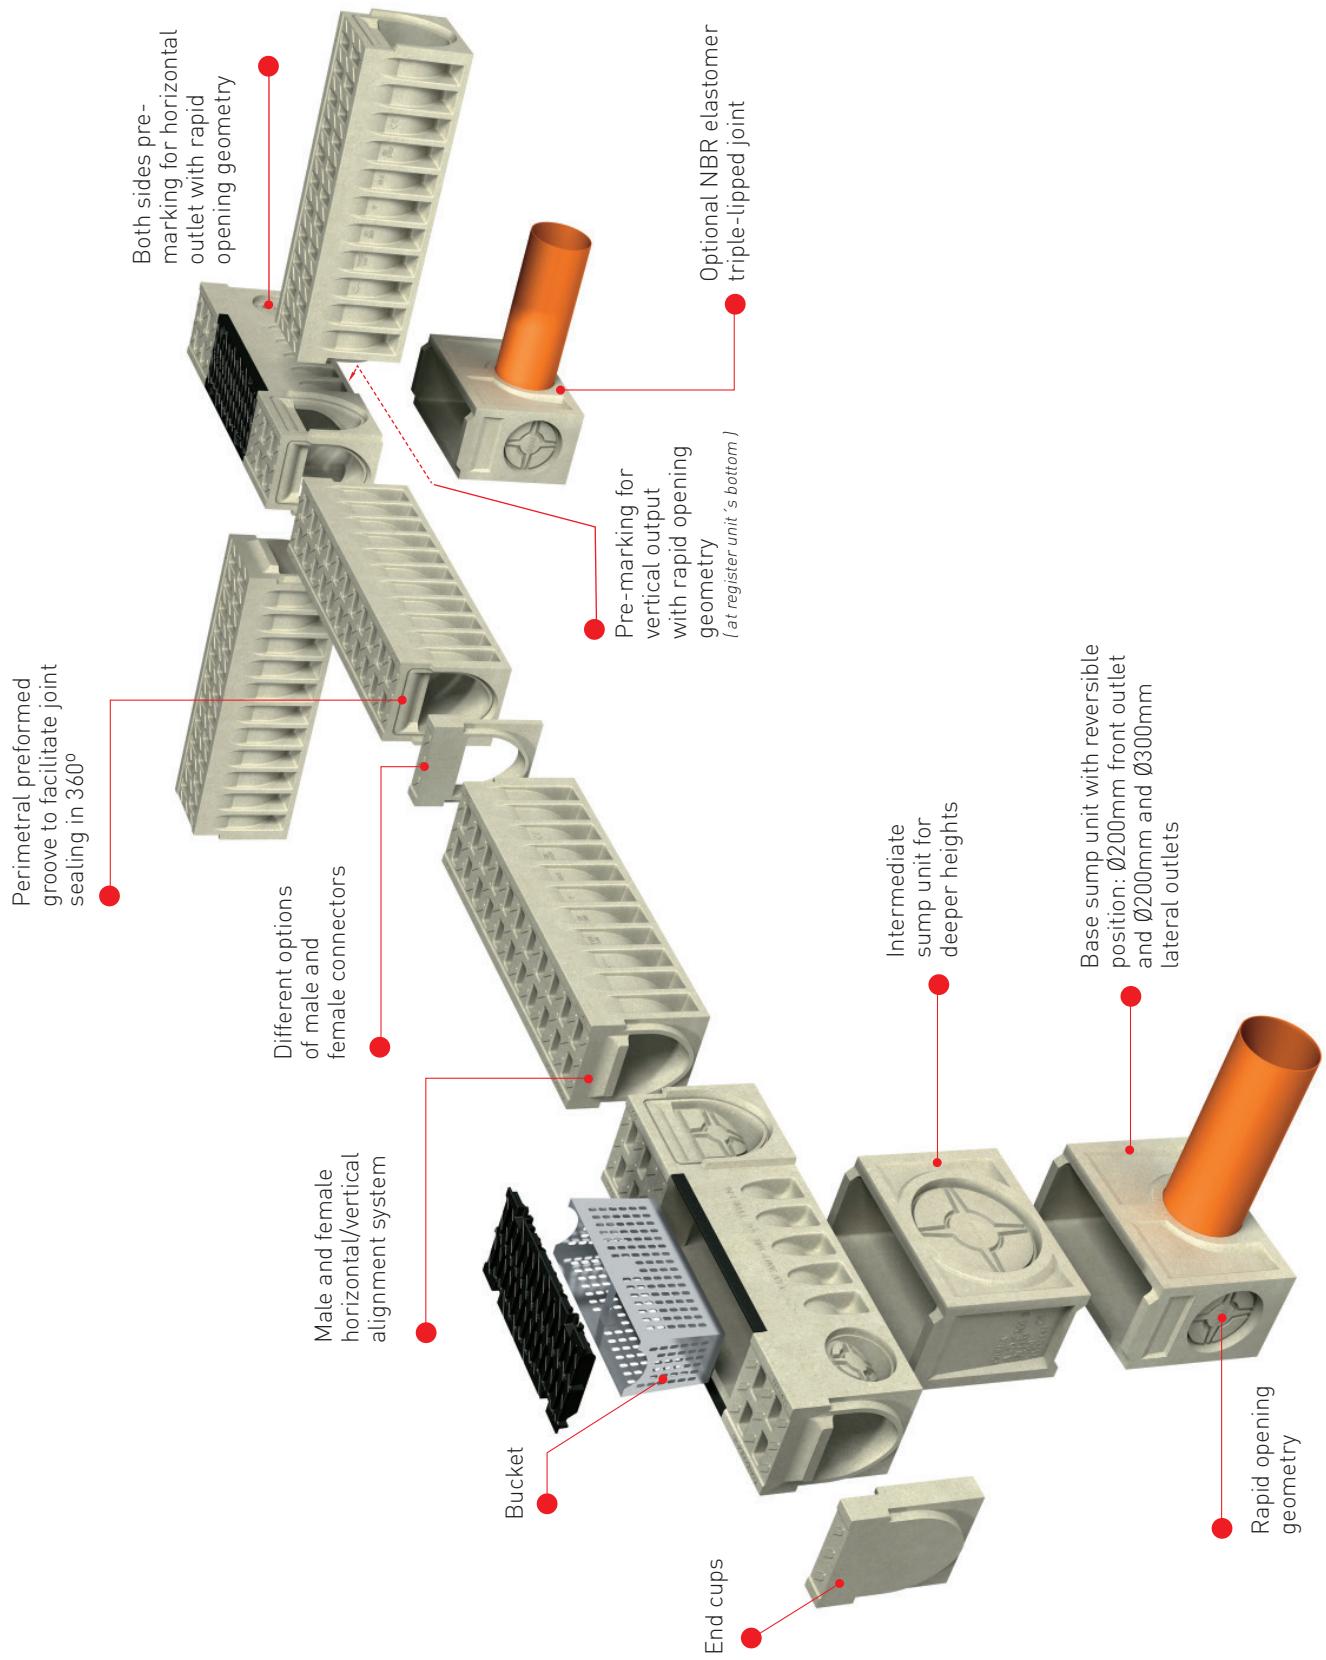

// IT INCREASES THE WATER ENTRY SPEED  
AND THE DRAINAGE CAPACITY

// PROGRESSIVE WIDENING TO PREVENT  
DIRT BLOCKAGE

# KOMPAQ DRAIN® OVERVIEW

# KOMPAQ100

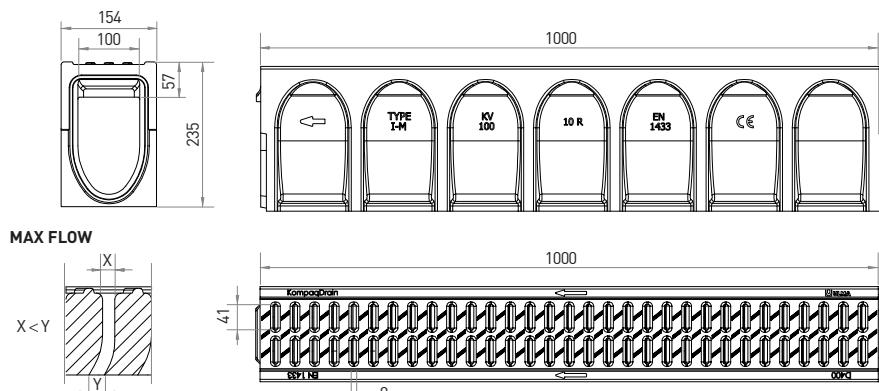

CITY

LOAD CLASS  
UP TO D400  
EN-1433 STANDARD

Linear Drainage Channel model **ULMA KompaqDrain® City KVFDH100**, with an integral grating, presented in one-piece and manufactured by high resistant Polymer Concrete. Vandal – proof and corrosion resistant. Load class up to D-400, for all types' vehicles crossing and with reduced capture holes of 8 mm. With "V" optimized shaped and capture holes with MAX-FLOW® geometry: self-cleaning effect at a low flow, increase at maximum flow and positive opening in order to avoid dirt blockage, for areas

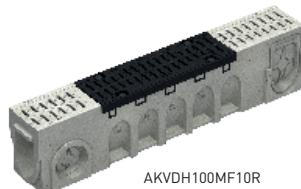

without slope. Active surface for cutting of water sheet and for its driving to uptake holes and with non-slippery protuberances. Male and female horizontal and vertical alignment and perimetral preformed Groove to facilitate joint sealing in 360°. The register and the sump unit include: cast iron grating FNX100FTDM, lateral preforms for horizontal outlets on each side and lateral preforms for connections in T, L and in cross.

# KOMPAQ200

CITY

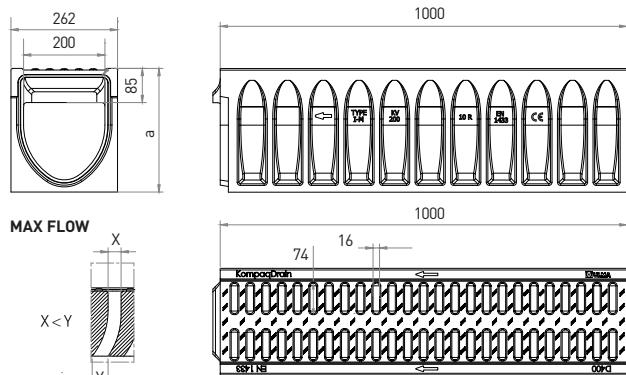

LOAD CLASS  
UP TO D400  
EN-1433 STANDARD

Linear Drainage Channel model **ULMA KompaqDrain® City KVFDH200** with an integral grating, presented in one-piece and manufactured by high resistant Polymer Concrete. Vandal - proof and corrosion resistant. Load class up to D-400, for all types' vehicles crossing and with reduced capture holes of 16mm. With "V" optimized shaped and capture holes with MAX-FLOW® geometry: self-cleaning effect at a low flow, increase at maximum flow and positive opening in order to avoid dirt blockage, for areas without

slope. Active surface for cutting of water sheet and for its driving to uptake holes and with non-slippery protuberances. Male and female horizontal and vertical alignment and perimetral preformed Groove to facilitate joint sealing in 360°.

The register and the sump unit include: cast iron grating FNX200FTDM, lateral preforms for horizontal outlets on each side and lateral preforms for connections in T, L and in cross.

# GENERAL TERMS AND CONDITIONS OF PROVISION ON WORK SITE

The **ULMA Architectural Solutions** drainage system has been designed and tested under the strictest premises of STANDARD EN1433, following the constructive details illustrated in the following pages. The design of the slab adjacent to the channel/concrete base (concrete, asphalt or paver) assembly must have the necessary shrinkage and expansion joints to avoid any tangential or perpendicular stress on the channel and concrete base assembly. Depending on the

constructive details of the slab, the sizing of these joints will be the responsibility of the Construction Management or planner.

The following illustrations show the appropriate installed section for each type of pavement and load class, as well as the recommended constructive details. However, for sections that are not covered, please consult our technical department.

## INDICATIONS COMMON TO ALL THE DIFFERENT TYPES OF INSTALLATION

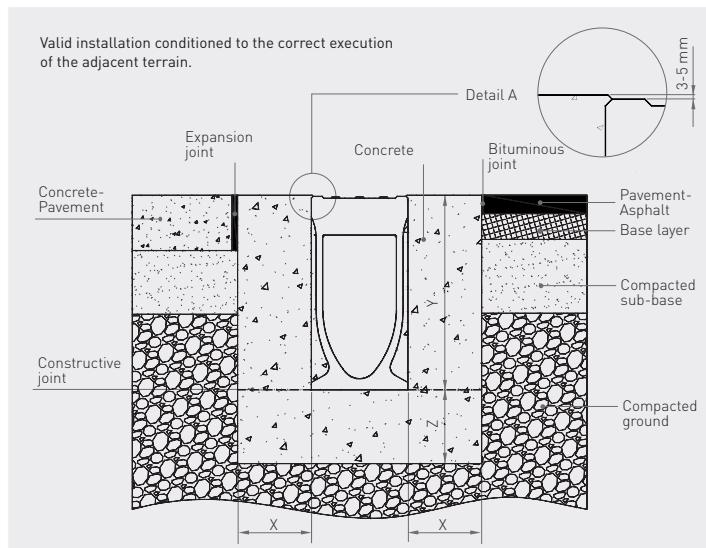

The trench must have the necessary depth and width to allow the recommended dimensions of the base given in Table 1 to be met according to the type of load required.

If a compaction process is required close to the channel (e.g. asphalt pavement, classes A15 and B125), special care should be taken not to damage the channel edge and walls.

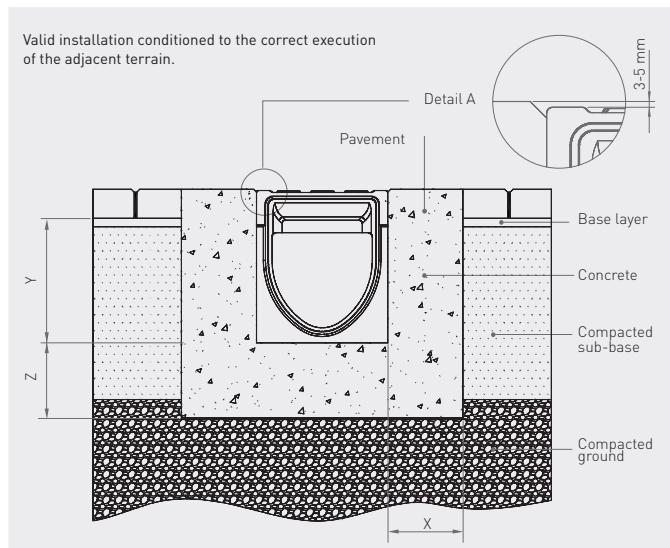

The surrounding pavement and concrete base should be on a level between 3 and 5 mm above the level of the upper edge of the channel.

It is recommended that the land adjacent to the channel should have a degree of compaction close to 90% of the modified proctor.

## CONCRETE AND ASPHALTE PAVEMENT

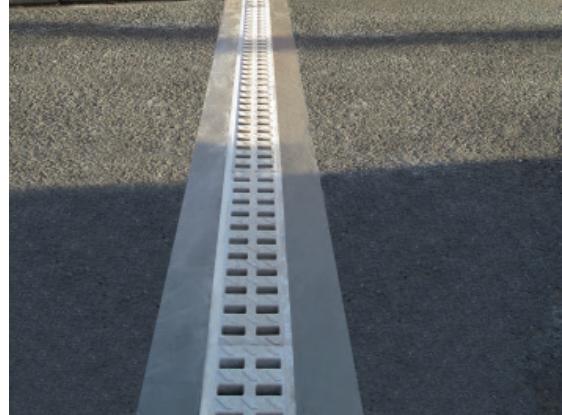

## PAVING

Load class EN 1433 Standard	A15	B125	C250	D400	E600	F900
Concrete type (kg/cm <sup>2</sup> ) BS EN 1992-1-1 Standard				250	250	250
	X			150	150 / 200	200
Minimum distances (mm)	Y			Channel height + grating+ 3-5mm, see Detail A		
	Z			150	150 / 200	200

Load class EN 1433 Standard	A15	B125	C250	D400
Concrete type (kg/cm <sup>2</sup> ) BS EN 1992-1-1 Standard	150	250	250	250
	X	100	100	150
Minimum distances (mm)	Y	Minimally up to a point located 40 mm below the floor level		
	Z	100	100	150

\* Minimum conditions required for installation. For more details see instructions. It is the responsibility of the client to ensure that the installation instructions are compatible with the nature of the terrain.
